Welcome to Fleetwood Windows & Doors

Before You Begin
We are proud of our 54+ year history as a California-based window and door manufacturer. In a time when others are making products in foreign countries, Fleetwood remains true to its essential purpose as an American company, employing American workers making quality products.

We believe we are helping support the American dream of success by relying upon God and this country's ingenuity and work ethic, which has made the United States of America the greatest country in the world. Our focus is to innovate, not imitate.

You will discover that we continue to blaze a trail of top quality and innovative design, like our patented Archetype door latch system.

We appreciate the amount of time it takes to properly research windows and doors. We believe you will discover that Fleetwood offers much more value than any other window and door company. If possible, visit our factory or a dealer showroom. Once you have operated one of our life size doors (the bigger the better!) you will understand our reputation.

Product Index
TO ASSIST YOU IN PRODUCT GROUPINGS, WE OFFER TWO DISTINCT QUALITY LEVELS. This catalog is only highlighting the most desired products within the Fleetwood family. We refer to these products as the Premium Package.

Finishes
ONE OF THE UNIQUE TRAITS OF ALUMINUM IS ITS ABILITY TO HAVE MULTIPLE FINISHES. IF PROPERLY MAINTAINED, THESE FINISHES WILL LAST A LIFETIME. WE OFFER MORE INFORMATION ON OUR WEBSITE IN ‘MAKING THE RIGHT CHOICES’ (DESIGNERS AND HOMEOWNERS SECTIONS).

ANODIZED
Anodizing is a chemical process that makes the aluminum surface harder and thicker. It was used by the US Military in WWII as a finish to protect against corrosion on its aircraft. [Process: Each extrusion is electrically charged while submerged in acid (changes aluminum oxide to aluminum hydrate). If an earth tone color is desired, the aluminum is dipped in a color tank and then sealed.]

FAST TRACK FINISHES
Fleetwood offers its aluminum products in thousands of colors but offers the following three finishes with a faster production time.

CUSTOM COLOR ANODIZING
We offer five additional earth tone colors, shown here. Customers should expect shade variation so if exact color uniformity is desired, paint may be the better choice.

PAINTED
We use the same paint (Kynar 500™) which high-rise buildings around the world demand because of its exceptional color retention and salt air protection. [Process: Each extrusion is chemically pretreated, painted electro-statically, then cured in an oven.] Edge Armor is optional and recommended near the coast.

The five custom earth tone colors shown here are consistent with the corresponding custom color anodized shades.

16 OF OUR MOST POPULAR COLORS

Please note: The colors in this brochure are not anodized or painted on aluminum and will therefore vary slightly.
Benefits of Aluminum

THERE ARE NUMEROUS REASONS TO CHOOSE ALUMINUM WINDOWS AND DOORS.

LOW MAINTENANCE
Without question, aluminum is the most durable and easily maintained window material. For general applications where regular maintenance of your windows is expected, our standard anodize finishing is an excellent choice for durability purposes. However, for those who may not be able to provide as strict a regime of maintenance, we strongly recommend Edge Armor which involves total fabrication of your products before painting so all edges are armored.

CRISP, LINEAR SHAPES
Aluminum can easily be designed with great intricacy, which provides narrow sightlines, allowing the door or window to blend into the architecture rather than overpower it. For example, the Series 3070 is available 15’ tall and the vertical sightline is a slim 2-1/8”.

ENERGY COMPLIANCE
Though not as efficient as wood, aluminum allows huge glass expanses that not only accentuate your view but also welcome more natural light. Fleetwood can help the project complying with local codes by offering the following three tools:

NFRC Test Result Matrix:
Our online product pages provide links to all current test results for each product.

Weighted Average Per Quote:
A weighted average energy report, based on the NFRC Test Results is provided with each quote.

Custom Analysis:
By using the same software NFRC uses to create its rest results (above), Fleetwood provides a custom energy report with each quote. One can expect a performance improvement range of 5%–20%.

SHGC & U-FACTOR:
The SHGC measures heat gain based on direct sun exposure. The lower the number, the less heat (short wave radiation) passes through the window or door. This is perhaps the most important consideration when selecting the right glass for hotter climates.

The U-Factor measures heat lost through the window/door. Be careful not to apply too much importance to this factor because the test is done with all seams taped shut. It is therefore a material conduction test and not a true operable window test. In some applications, Fleetwood recommends NOT using thermally broken products. For more information: http://www.fleetwoodusa.com/menu_bar/Designers/Choosing-The-Right-Product.php.

FIRE HEAT RESISTANCE
Products designed to resist the impingement of flames are often made of steel, which has limits in function and design. In contrast, aluminum, though not fire proof, offers diverse design elements with practical fire performance. Specifically, aluminum windows can help maintain firewall integrity because extruded aluminum retains its form at over 1000°F. Typical residential windows are quickly destroyed by heat and flames, creating large openings for flying embers to enter. The urban wild fire building codes are addressing some of these practical realities and seem to be leaning toward aluminum or steel as the preferred building material.

ENTRY LEVEL PRODUCT LINE
Fleetwood offers a product line for projects desiring the overall quality of a Fleetwood but with fewer features. For more information, visit the Products section online.
The “Little” Things

REAL QUALITY IS MORE THAN WHAT WE SEE. IT IS A COLLECTION OF Refined Components, OFTEN HIDDEN, THAT HAVE BEEN ASSEMBLED INTO EXCELLENCE. Every Fleetwood product enjoys this pursuit of excellence and here are a few examples:

“THERMAL FRAME” TECHNOLOGY:
Fleetwood continues to lead the market with innovative approaches to function and form. One example is the introduction of “thermal frame” products wherein each extrusion is separated by a thermal barrier to maximize energy efficiency (read more on page 10).

ROLLER BEARINGS:
ROLEX vs. Timex
Most anything can be copied these days and sliding door rollers are no exception. Some manufacturers have upgraded from ball bearings to a sealed bearing and wrongly claim it as precision. Only Fleetwood uses an authentic precision bearing from Switzerland in our premium door lines. Each bearing is carefully inserted into its wheel, using American labor and strict quality control. Sealed bearing rollers are certainly an upgrade to ball bearings and this is why our Entry Level sliding door Series 1000 comes standard with them. Fleetwood sliding doors operate so efficiently that potential harm to person or property can occur if not operated carefully.

SLIDING DOOR HARDWARE:
Latch & Strike Plate
The standard hardware on all sliding doors is our own Archetype Hardware. Most multi-slide doors over 96” in height come standard with two latches (Archetype II). The standard single latch (Archetype I) is used on multi-slide doors under 96” and on all traditional sliding doors regardless of height.

• Made in the USA
• Electro-Polished, 316 Stainless Steel
• Ergonomic Actuator & Indicator
• Laminated Hook Latch
• Boxed, Adjustable Strike Plate

Archetype Hardware standard on:
Series 3070
Series 3070-T
Series 3000
Series 3300-T

SLIDING DOOR HARDWARE:
Latch & Strike Plate
The standard hardware on all sliding doors is our own Archetype Hardware. Most multi-slide doors over 96” in height come standard with two latches (Archetype II). The standard single latch (Archetype I) is used on multi-slide doors under 96” and on all traditional sliding doors regardless of height.

• Made in the USA
• Electro-Polished, 316 Stainless Steel
• Ergonomic Actuator & Indicator
• Laminated Hook Latch
• Boxed, Adjustable Strike Plate

Aluminum: The Future is Here

ALUMINUM PRODUCTION:
It is estimated that over 8% of the earth’s crust contains bauxite ore, which is naturally rich in aluminum oxide (“alumina”). The world was aware of this as early as the Babylonian Empire but was unable to efficiently isolate aluminum. It was not until the late 1800’s that an American scientist, Charles Martin Hall, discovered the process that changed the world:

Step 1: MINING
Bauxite is mined and gathered.

Step 2: REFINING
Bauxite is finely ground and mixed with lime and caustic soda which produces a sugar-like white powder called “alumina” (also known as aluminum oxide).

Step 3: SMELTING
The alumina is dissolved in a cryolite bath. During this molten state, a powerful electric current is passed through the bath and aluminum is separated from the chemical solution and powerful machines siphon off the aluminum.

Step 4: FABRICATING
Aluminum is placed into a furnace where it is melted down and mixed with other metals to produce customer specified alloys. These molten mixes are then poured into ingots which harden and then are shipped for further fabrication, such as extruding.

SUSTAINABLE & GREEN:
Aluminum is a fantastic building product for those concerned about sustainability. It is naturally plentiful and perpetually surviving. Moreover, aluminum rates very high in Life Cycle Assessment and leaves a small ecological footprint. All windows and doors eventually must be replaced but aluminum windows and doors last decades longer than wood and vinyl. Consider the impact on the world’s landfills with all the wood and vinyl waste. Additionally, imagine the wasted energy on redundant manufacturing of short-lived wood and vinyl windows and doors. For more information about why Fleetwood products are a wise choice for the environmentally conscious homeowner, please see our Green & Sustainable document online at www.FleetwoodUSA.com, under the Designers menu.

For more information, view Products at www.FleetwoodUSA.com
SERIES 3070
MULTI-SLIDE & POCKET DOOR

CONFIGURATIONS

- Unlimited Multi-Slide, Curved, Pocket, and Corner applications.

MAX PANEL WIDTH | MAX PANEL HEIGHT | BEST SHGC | BEST U-VALUE
--- | --- | --- | ---
10’** | 18’** | 0.22 | 0.32*

*Simulated performance (24' x 12' OXXX using SN68/Argon/ES20). NFRC standard size yields 0.47.
**Max width and height are not necessarily available in combination.
**DESIGN NOTES**

- Huge sizes/thin sightlines.
- Easiest rolling door made (authentic Swiss bearings).
- Weather rated.

---

**Double Leg Rail:**

The double leg design is both attractive and functional. To appreciate its beauty, you need to see a full size display. The double leg offers twice as much weather-stripping as a cheaper, single leg design and better repels sand, debris, insects and other unwanted matter.

**Sill & Head Fillers:**

The Series 3070 comes standard with matching extrusions that fill unused cavities in the head and sill. These closers enhance the cosmetic beauty of the product but also serve the practical function of repelling sand, water, air and bugs.

---

**Locking Hardware:**

The Series 3070 offers two lock stile choices. The standard is our patented Archetype system (page 4). However, an even slimmer option is our patent pending Archetype Narrow (pictured above). The Narrow includes the same latch as the Archetype, a vertical actuation and small profile handle, and a keyed lock option.

**Sub-Sillpan Option:**

This feature creates a continuous floor look similar to the Series 3050 Hidden Track (page 10), but with weather performance. Specifically, the staggered track option achieves a 6 PSF water test result, which is equal to an HC-40 (Heavy Commercial) door. The detail above shows how the tracking system can be level with the finished floor but still provide exceptional water performance underneath. This feature is also available on the thermal frame Series 3070-T (pages 7–8).
SERIES 3070-T
"THERMAL FRAME" MULTI-SLIDE & POCKET DOOR

**MAX PANEL HEIGHT**
- 12' **

**MAX PANEL WIDTH**
- 8' **

**BEST SHGC**
- 0.15

**BEST U-VALUE**
- 0.30 *

**CONFIGURATIONS**
- Unlimited Multi-Slide, Pocket, and Corner applications.

*Simulated performance (12' x 12' OXX using Cardinal 366/Argon/189). NFRC standard size yields 0.34.

**Max width and height are not necessarily available in combination.

Made in the U.S.A.
**DESIGN NOTES**

- More energy efficient version of the 3070.
- The first completely insulated multi-slide door.
- Swiss bearing rollers are a standard feature.

---

**Minimalistic Hardware:**

The standard locking system is our patented Archetype system (page 4). However, the 3070-T offers the option of a sleeker locking stile (pictured above) called the Archetype Narrow. The Narrow includes the same latch as the Archetype but with a vertical actuation and a small footprint handle.

---

**“Thermal Frame” Extrusions:**

Our designs have dramatically reduced the transfer of heat and cold through the extrusion by adding a thermal barrier. Fleetwood uses two methods: Pour/De-bridge and I-Strut. The former process involves pouring liquid polyurethane into an extrusion pocket and removing the underside once the liquid hardens. The I-Strut process involves mechanically joining a polyamide strut to two separate extrusions. Both are proven systems but struts offer more attractive extrusion designs in certain shapes, such as the High Performance Interlocker (see lower left).

---

**High Performance Interlocker:**

The Series 3070-T and Series 3300-T sliding doors offer a thermally improved I-Strut high performance interlocker option for high wind load conditions or taller doors requiring additional stiffness.

---

**No Post Corner:**

A custom extrusion was created to allow a 90° corner without the need for a post or jamb. The result is the strongest and most attractive corner door on the market. Imagine the stunning view once the doors are in the fully opened position. To make it even more dramatic, design the walls to allow these door panels to disappear into a pocket.
SERIES 3050
MULTI-SLIDE & POCKET DOOR

- Unlimited Multi-Slide, Curved, Pocket, and Corner applications.

MAX PANEL WIDTH | MAX PANEL HEIGHT | BEST SHGC | BEST U-VALUE
--- | --- | --- | ---
10'** | 18'** | 0.16 | 0.39*

**Simulated performance (10' x 12' PXIXP using Cardinal 366/Argon/i89). NFRC standard size yields 0.48.

*Max width and height are not necessarily available in combination.

*Simulated performance (10' x 12' PXIXP using Cardinal 366/Argon/i89). NFRC standard size yields 0.48.
**DESIGN NOTES**

- Barefoot sill (not weather rated).
- Promotes indoor/outdoor living.
- Complements the weather rated 3070.

---

**½" Threshold:**

Shown herein, the Series 3050 comes with an optional threshold that meets the American Disabilities Act maximum sill requirement of 1/2" tall. Regardless of which threshold is selected, the Series 3050 has a minimal starting force and operating force (less than 5 lbs. on 300 lbs. panel) and when coupled with the Actuator lever (see page 39), the Series 3050 is the ideal sliding door for applications requiring ADA standards.

---

**Hidden Track System:**

The track system of the Series 3050 is unique in several aspects, chief of which is the seamless transition from inside to outside. Additionally, the Hidden Track is available in two heights (1-½" or 1") to accommodate most floors. Because the Hidden Track utilizes the same stainless insert as all Fleetwood sliding doors, replacement is easy and does not require demolition to the finished flooring.

---

**Curved/Bent: Hidden Track**

The aluminum and glass can be bent to your precise specifications (12’+ radius) and the number of panels is unlimited. (For weather or energy performance, the Series 3070 is offered bent too.) The image above shows the track before the finished flooring is installed and the image below shows post installation.

---

**Deluxe Screen:**

Ours is the finest sliding screen door made because it uses the same extruded aluminum parts as the glass panels. This allows for extremely large screen systems that operate with ease. Additionally, as with all Fleetwood products, the screen mesh is Phifer’s "UltraVue."

---

**Pinnacle Architecture (Las Vegas, NV)**

Curved/Bent: Hidden Track

The aluminum and glass can be bent to your precise specifications (12’+ radius) and the number of panels is unlimited. (For weather or energy performance, the Series 3070 is offered bent too.) <td>0.35*</td>
</tr>
</tbody>
</table>

**Simulated performance (15’ x 12’ OXO using SNX62/27/Argon/IS20). NFRC standard size yields 0.47.

**Max width and height are not necessarily available in combination.
**DESIGN NOTES**

- Ergonomic flush latch.
- Industry’s largest sizes in a traditional configuration.

---

**Swiss Bearing Rollers:**

Before assembling the roller in our US factory, our Swiss partner has shipped us authentic precision bearings for each wheel. Our technicians carefully assemble the finished product, which is capable of easily handling panel weights of 1,000 lbs. The Series 3000 sliding door uses the same exceptional stainless tandem roller as the Series 3300-T.

---

**Stainless Strike Plate:**

It not only covers the rough wall but also prevents bugs and spiders from entering the home through the latch cavity. The double plate offers additional security.

---

**Locking Hardware:**

Both the Series 3000 and Series 3300-T (pages 13-14) offer two stile choices. The standard (Archetype) can be seen on page 4. However, an even slimmer option is our Archetype Narrow (pictured above).

---

**Threshold Choices:**

The Series 3000 comes standard with a 1-7/8” tall threshold (shown above, center). This sill height provides enough water protection for light commercial applications (6 psf). However, for projects demanding greater water performance, we offer a 3” tall threshold (10 psf). If exceptional water performance is not required, consider the 1-1/4” height sill.
SERIES 3300-T

HEAD

FIXED JAMB

STANDARD

SILL

INTERLOCKERS

Optional: Archetype Narrow MEETING STILES
**DESIGN NOTES**

- More energy efficient version of the 3000.
- Available 10’ tall.

**“Thermal Frame” Extrusions:**
The ultimate combination of structural integrity and energy efficiency. Each extrusion was engineered to provide the precise location of the polyurethane so performance was achieved and aesthetics were not compromised. When the Series 3300-T is closed, you cannot tell the extrusions are insulated. Cheaper models have made no attempt to hide the black lines.

**Stainless Track Insert:**
All Fleetwood sliding doors come standard with an engineered track and roller marriage. Cheaper doors offer a steel cover that curls up over time since the convex/concave relationship is compromised. In contrast, track inserts get stronger as weight bears down and the concavity of the roller is in perfect harmony to the convex shape of the insert. The image above shows the optional High Water sill (available on the Series 3300-T and 3000).

**Customization::**
We offer an option on the Series 3300-T which allows a center sliding panel: it is called a false jamb (shown above). This same extrusion can be used as an “in frame” mullion between a series of fixed panels to create a large opening, i.e. OOOOXOOOO. See page 12 for additional information on optional locking hardware.

**Optional Keyed Lock:**
Fleetwood’s proprietary Archetype Hardware is offered with an exterior keyed lock. This flush cylinder allows panels to flush stack and bypass. We have chosen a commercial grade, 5-pin, “C” keyway lock by Schlage. This keyed lock is offered on the following products: 3070, 3070-T, 3050, 3300-T, 3000 and 3400P.
SERIES 3500
LUXURY HOME HINGED DOOR

</tr>
</tbody>
</table>

*Simulated performance (7’ x 10’ OH using Cardinal 366/Argon/88). NFRC standard size yields 0.66.

**Max width and height are not necessarily available in combination.
DESIGN NOTES

- Performance tested front door.
- Panel sizes up to 11' tall.

Threshold Choices:
The standard threshold is 1-7/8" for optimum water and air performance. We offer two optional thresholds: a 1/2" flush sill (shown above) and one for high rise applications or extreme weather needs.

Steel Look TDL Bar:
The sleek 1-1/2" sightline emulates typical steel windows, but with the benefit of aluminum (i.e. cost, maintenance, etc.).

Corner Integrity:
If a hinged door corner fails, the entire door falls apart. The Series 3500 was engineered around this reality and therefore utilizes the strongest corner construction available. Each corner is bolstered with a large extruded corner key that is keyed and welded into each side.

Multi-Point Locking Hardware:
The Series 3500 is without question the best in class. One of the reasons for this distinction is the stainless steel locking hardware, which has 5 different latches that work in unison and plunge into stainless steel keepers for exceptional security.
**SERIES 3900-T**

**“THERMAL FRAME” LUXURY HOME HINGED DOOR**

- **ASTRAGAL**

*Made in the U.S.A.*
**DESIGN NOTES**

- “Thermal Frame” aluminum extrusions.
- Modern architecture butt joint corners.

---

**Sleekier Sightline:**

The Series 3900-T is essentially a thermally enhanced version of the Series 3500 (pages 15–16). During the design process, we applied a few improvements, one of which is to reduce the amount of metal on a single vent by more than 1-1/2”. Also, note from the SILL detail on page 17 that the height has been reduced and has a boxier shape.

---

**Corner Strength:**

Another design enhancement is butt joinery instead of mitering, because it offers a look more consistent with modern architecture. In order to achieve this feature, we needed an exceptional corner key. From the image above, you can begin to appreciate the strength of each corner as you consider the mass of the key. The wall thickness exceeds 5/16” in most locations and penetrates 4-1/4”.

---

**Outstanding Sizes:**

The Series 3900-T was designed to fit an 80 square foot opening with only two panels. In addition to the robust extrusions and corner design, the 3-way adjustable hinges make large openings possible.

---

**“Thermal Frame” Technology:**

The Series 3900-T thermal barrier is a modern technology called “I-Strut.” This contemporary process joins two extrusions together with a high resin “strut” instead of pouring and de-bridging a single extrusion. We selected this newer technology because it offers greater extrusion design flexibility without compromising thermal performance.

---

For more information, view Products at [www.FleetwoodUSA.com](http://www.FleetwoodUSA.com)
SERIES 3200-T
NARROW STYLE “THERMAL FRAME” HINGED DOOR

TYPICAL CONFIGURATIONS

- H, HH.

MAX PANEL WIDTH | MAX PANEL HEIGHT | SHGC | U-VALUE
---|---|---|---
40" | 108" | Pending | Pending

ELEVATION VIEW: H CONFIGURATION

HEAD

SILL

LOCK JAMB

HINGE SIDE JAMB

ASTRALGAL (PAIRED DOORS)
DESIGN NOTES

- Narrow 3-15/16" jamb profile.
- Adjustable hinges.

Slender Lines:
The Series 3200-T boasts a jamb profile of only 4-15/16". Even better, the jamb was designed for finished walls to bury another 1", leaving a wall-to-glass profile of only 3-15/16".

Minimalist Hardware:
The locking hardware selected for the Series 3200-T is manufactured by FSB. The handle plate is a slimmer version of the Series 3900-T plate but uses the same stainless lever so mixing both products is more feasible. The door self latches when closed and is secured with a dead bolt (not shown).

Flush Mounted Adjustable Hinges:
Each vent is provided with four adjustable hinges that are mortised into the extrusions (see the cross section on page 19). The top and bottom hinges provide horizontal movement and the two center hinges allow for vertical adjusting.

Inswing Water Performance:
A new threshold was created just for the inswing option (also used on the Series 3900-T door). Notice the geometry guides the water into the trough where it can weep to the exterior.
## SERIES 3400P

### ELEVATION VIEW: H CONFIGURATION

![Elevation view diagram](image)

**Head**, **Sill**, **Pivot Point**, **Jamb**, **Lock Jamb**
DESIGN NOTES

- Dramatic operation.
- Massive single panels.
- Flush sill (no weather performance).

Factory Quality:
There are many imitators in the market, but only Fleetwood offers an aluminum frame pivot door with the high expectations of factory-controlled quality. For example, the strike plate is a custom design and is mortised into the jamb. Additionally, each frame and vent corner are carefully constructed with tight factory tolerances.

Patented Hardware:
The latching system on the Series 3400P is the same exceptional system as our premium sliding door systems. The Archetype is crafted with #316 marine grade stainless steel and is finished with an electro-polish process for ultimate corrosion resistance. We offer a variety of stainless steel pulls, or you may elect to install your own custom pull.

Closer Choices:
The Series 3400P offers three different closer options: no closer (pivots only), a floor closer, or a head closer. Depending on the panel weight, customers may choose the location of the closer/pivot. Floor closers are located beneath the floor whereas the head closer fits inside our 2” header. For an indoor/outdoor feel, some customers opt for a “no threshold” option.

Pull Choices:
The Series 3400P, as well as all of our multi-slide doors, offers a wide selection of contemporary and elegant pulls by FSB. From the online product page, you can choose from a variety of sizes, shapes and finishes. Four of these pulls are pictured here to demonstrate the diversity of the pull offerings.
# SERIES 3600

## LUXURY HOME FOLDING DOOR

- **INTERMEDIATE CARRIER**

---

Made in the U.S.A.
Three Threshold Choices:
Depending on the application, we offer three different choices ranging from weather performance to hidden track. The two smaller profile sills will be buried into the flooring either partially (shown above, center) or completely (shown above, right). These two options enhance the presentation but they offer no water or air resistance.

Locking Lever:
Each hinged locking section is equipped with a two-point lock that is engaged with a 180-degree turn.

Carrier Hardware:
Because Fleetwood is committed to the “little things” (see page 2), we insisted that only Centor hardware be used as the panel carriers. The engineering behind this hardware is obvious as soon as the panels are operated.
SERIES 3800-T
“THERMAL FRAME” WINDOW-WALL

MULLION
FIXED JAMB (LEFT)
FIXED JAMB (RIGHT)
**DESIGN NOTES**

- Factory fabricated system.
- Insulated framing.
- Design layout freedom.

"Storefront" Design:
Designers want the hard lines seen in typical commercial storefront but shudder at the thought of using commercial products for a variety of reasons. Our Series 3800-T fixed window system is the answer. It has similar designs as storefront but NONE of the downfalls.

Integral Nail-Fin:
Builders and homeowners can relax knowing their fixed Series 3800-T windows are installed with integral nail-fins. Some fixed products, e.g. storefront, do not have a nail-fin and some products attempt one by attaching a nail-fin. Also, notice in the image above that the 3800-T extrusions are insulated for maximum energy efficiency.

Window Insert Option:
Windows can be inserted into the Series 3800-T system *in lieu of glass*. As seen in the detail above, it is a clean presentation that reduces sight lines compared to typical window-on-frame insertions. The 3800-T also accepts fixed door panel inserts, which allow side lite rails to line up with adjacent sliding doors.

Factory Weep Slots:
Because storefront is fabricated in the field, it lacks the fit and finish required by most homeowners. The Series 3800-T has been laboratory tested against water infiltration and high wind loads. Additionally, the 3800-T has insulated framing and boasts exceptional energy test results.

Fixed systems are also available in all the products listed in the Windows section of this brochure.
SERIES 250-T
“THERMAL FRAME” CASEMENT, AWNING & HOPPER

TYPICAL CONFIGURATIONS
- C, CC, COC, A, AA, AOA.
- Maximum Panel Width: Casement: 4’.
- Maximum Panel Height: Awning: 5’; Casement: 8’, Hopper: 5’.
- Partner Products: Series 3800-T Fixed System (for inserts; pages 25–26).
  Series 250 Slider, Single Hung and Fixed Windows (page 31).

BEST SHGC  BEST U-VALUE

0.12   0.33*

*Simulated performance (6’ x 3’ awning using Cardinal 180/Argon/Cardinal 180/Argon/i89 triple glazing). NFRC standard size yields 0.37.
**DESIGN NOTES**

- Clean, linear sightlines.
- Insulated extrusions.
- Great sound, energy and wind performance.

**Buried Hinges:**

Our aluminum butt hinges are another example of the "little things." Other products surface-attach the hinges which creates more surface area for water penetration. **We also offer optional stainless steel hinges (see page 42).** For a completely hidden hinge, we offer the optional 4-bar stainless steel hinge, which is recommended for coastal and high wind projects.

**Welded Corners:**

The time proven method for building hinged windows comes standard on the Series 250-T. It includes an exceptionally strong corner, where an aluminum extruded corner key is first fitted into each vent extrusion, then crimped using a hydraulic press and is then finally welded in place. This is the same method used in creating the Series 3500 hinged door as well as the Series 2000 and Series 850-T windows.

**Steel Look TDL Bar:**

The sleek 1-⅛” sightline emulates typical steel windows, but with the benefit of aluminum (i.e. cost, maintenance, etc.).

**Hinged Screen:**

This austere new option features a magnetic keeper & latch, and neoprene bulb as the bug guard. Hinges are mounted top and bottom for casements and left-top and right-top for awnings. This feature is only offered with the 4-bar hinge option, which is what the factory recommends for coastal and high wind projects.
SERIES 850-T
“THERMAL FRAME” CASEMENT & AWNING

TYPICAL CONFIGURATIONS
- C, CC, COC, A, AA, AOA.
- Maximum Panel Width: Awning: 8’; Casement: 4.5’.
- Maximum Panel Height: Awning: 5’; Casement: 8’.
- Partner Products: Series 850-T Glazed to Frame.

BEST SHGC
0.14

BEST U-VALUE
0.33*

*Simulated performance (3’ x 6’ casement using SB60/Argon/LOF Super Spacer). NFRC standard size yields 0.46.
**DESIGN NOTES**

- Big and bold sightlines.
- Robust hardware allows for greater vent travel.
- Insulated extrusions.

**Concealed Hinge:**

The standard hinge design is a 2-bar, dual action hinge that is concealed when closed. This works in conjunction with the Dual Arm operator (see below). We offer an optional operating system for those who prefer a single arm. This feature comes at no additional cost and comes standard with exposed butt hinges, similar to the Series 250-T casement window (pages 27-28).

**Flush Fit Screen:**

The screen tucks nicely into extrusion grooves and therefore does NOT require surface mounted clips or anchors. The tension springs hold the screen against the perimeter frame and allow easy removal.

**Dual Arm Operator:**

The standard roto gear includes two coated steel arms that push and pull the window with exceptional smoothness. This hinge and operator combination can easily handle casement vents as heavy as 108 lbs. and awning vents as heavy as 118 lbs. Additionally, the hinges are available as an option in stainless steel. For even larger windows, we recommend the butt hinge option, which is similar to the standard hinge on the Series 250-T casement.

**Corner Key & Weld:**

The Series 850-T vent corners are hydraulically crimped together with an extruded aluminum corner key (see Corner Integrity, page 16, for an explanation of this process). This key not only provides the obvious connecting strength but it also bolsters the lateral stability which is evident during operation. To make these vent corners even stronger, we add a hot weld to each corner (see Welded Corners, page 28).
SERIES 530-T
“THERMAL FRAME” HORIZONTAL SLIDER & SINGLE HUNG

TYPICAL CONFIGURATIONS
• XO, OX, XOX, SH.
• Maximum Panel Width: Horizontal Slider: 78”; Single Hung: 58”.
• Maximum Panel Height: Horizontal Slider: 90”; Single Hung: 45”.
• Partner Products: Series 530-T Glazed to Frame.

BEST SHGC
0.15

BEST U-VALUE
0.35

*Simulated performance (8’ x 5’ XO using SS60/Argon/LOF Super Spacer). NFRC standard size yields 0.37.
**DESIGN NOTES**

- Large sizes.
- Concealed thermal material.

---

**Tandem Rollers:**
The Series 530-T rolling system is certainly unique in the market. It is the only sliding window with an adjustable tandem roller. Even more, the roller housing is made of stainless steel and nylon tires so the aluminum and finish are not damaged.

---

**Designer Latch:**
Every Fleetwood sliding window comes standard with our own proprietary latch. Made in the USA and constructed of #316 stainless steel, this latch has no rival. It is a self-latching design so you only need close the window to be sure it is securely locked. Available in either a brushed stainless or painted black. If a custom color is desired, it can be easily removed from the window and sent to a local finisher.

---

**Side Load Single Hung:**
The Series 530-T single hung incorporates the same balance system as the Series 250 single hung. These **block and tackle** sash balances are much more stable than the adjustable spiral balances often found in cheaper window products. Typical residential windows offer flashy features such as tilt and clean but that feature dramatically alters the simple architectural lines of the extrusion. The 530-T, as well as the 250 single hung, both provide clean lines only offered by concealed balances.

---

**Center Glaze Look:**
The Series 530-T operable windows are accompanied by a fixed system of the same frame depth. Some customers prefer the 530-T fixed window because the glazing is more centered. Notice the factory supplied sill pan.
TYPICAL CONFIGURATIONS

- XO, OX, XOX, SH.
- Maximum Panel Height: Horizontal Slider: 72"; Single Hung: 78".

<tr>
<td>0.19</td>
<td>0.48*</td>
</tr>
</tbody>
</table>

*Simulated performance (6' x 5' XO using Cardinal 366/Argon), NFRC standard size yields 0.49.
DESIGN NOTES

- Narrow perimeter lines.
- Extruded screen.

True Divided Lite:
In some instances, the glass needs to be divided and provide either a vertical or horizontal sightline. The Series 250 offers an attractive shape to accomplish this desire and we call it a “muntin bar” (offered in most products). This extrusion is available in either 1/4" single glazing or 5/8" dual glazing.

Strike Plate:
The stainless steel strike plate is an important partner to the Series 250 latch (see Designer Latch, page 32). It takes up very little space in the view-line but is secure. Other windows fatten the centerline and add a groove or strike.

Ball Bearing Rollers & Extruded Screen:
Most windows in this class provide flimsy rollers and a roll formed screen, whose anodizing does not match the rest of the window, in order to save on costs. These are two areas that should not be compromised. The Series 250 comes standard with a 3/4" diameter nylon wheel with ball bearings AND an extruded screen frame.

Fixed Window:
The Series 250 product family offers a fixed system that accepts 1" insulated glass and insulated glazing uses such as mitered corner. Notice the factory supplied sill pan.
SERIES 510
HORIZONTAL SLIDER

BEST U-VALUE
- 0.45*

DESIGN NOTES
- Sliding screen.
- Extreme weather performance options.
- Multi-Slide capability.

Reverse Interlockers:
The Series 510 is the only window on the market that offers a reverse interlocker (see detail to left). This unique feature allows designers to create multiple sliding vents with perfect symmetry. For example, an XXXX is an ideal configuration for multi-story applications allowing for easy installation and full surface cleaning from INSIDE the room.

Double Slide:
The Series 510 can easily be transformed into a window wherein ALL panels slide. In typical two story houses, this feature allows the homeowner to clean all surfaces of the glass without requiring access to the exterior of the window. This saves money and eliminates the potential for injury to the do-it-yourself homeowner.

*Simulated performance (8’ x 5’ XX using Cardinal 366/Argon). NFRC standard size yields 0.53.
**Max width and height are not necessarily available in combination.
High Performance Options

FLEETWOOD OFFERS A VARIETY OF EXTRUSIONS AND COMPONENTS TO BOLSTER WIND LOAD, WATER PERFORMANCE AND DEAD LOAD, A SELECT FEW OF WHICH ARE DETAILED BELOW FOR YOUR CONSIDERATION.

Sub-Sillpans & Sub-Sills:
When air pressures and wind velocity are extreme, we recommend sub-sills (shown above). Negative pressure pulls water into the room and prevents it from draining from the door or window. Our sub-sills safely hold large amounts of water, e.g. high-rise applications, which can safely evacuate instead of pouring the water over the sill and into the room.

Available In:
Doors: Series 3070, Series 3070-T.
Windows: Series 530-T, Series 510, Series 250.

Integral Stack Bars:
The integral stack bar design is a modern improvement over the typical three-piece system. With an integral stack bar, each frame jamb is one piece so it is more attractive and provides better water leak prevention.

Available In:
Doors: N/A.
Windows: Series 530-T, Series 510, Series 250.

High Water Threshold:
As wind pressure increases, rain is restricted from weeping away from the window or door. This results in a water-head that rises quickly. One of the best ways to defend against such occurrences is to install a sub sill (as noted above) for windows or a taller sill leg for sliding doors. We offer various sill options as well as custom sill pan heights.

Available In:
Doors: Sill Pan: All – High Water Threshold: Series 3300-T, Series 3000, Series 3500.
Windows: Sill Pan: All – High Water Threshold: N/A.

Meeting Stiles:
High performance meeting stiles are recommended anytime wind loads exceed 50 mph. We also offer an option that reduces the sight line by 2".

Available In:
Doors: Series 3070, Series 3050, Series 3000, Series 3300-T.
Windows: Series 530-T, Series 510.
